Careers in the urban environment

A career in the urban environment can be one of the most rewarding, providing world-class buildings for the UK's top businesses, regenerating local communities and providing sustainable housing to meet the needs of generations to come. Jobs in the urban sphere are wide-ranging with roles for school leavers to highly trained postgraduates.

Perhaps the most prolific job in the sector is that of an paperhelp coupon code, who designs and plans buildings to fit in with the local environment, as well as looking aesthetically pleasing. Involving a combination of hands-on and academic experience, architects take on average 8 years to complete their studies – the same duration of time as training to be a doctor. Nevertheless, with the ability to enhance whole cityscapes, removing social barriers, reducing fear of crime, creating community space and iconic buildings, architecture truly is one of the most encompassing professions. Being rewarded for their hard study, architecture professionals expect to earn in excess of £35,000 when fully qualified, rising to £80,000 at senior levels.

Housing jobs are vital in addressing the needs of the UK's growing population, providing high quality housing to suit everyone's needs and liaising with developers to refurbish existing housing stocks. Popular roles in housing include housing officers and managers, working with local authorities and housing associations to look after a particular community's housing needs. With different areas of specialism, including homeless people, the disabled or young families, housing jobs are helping people from a bottom up approach. Roles are hands-on, meeting prospective tenants, inspecting the property portfolio and building vital relationships in a designated local area.

Town planning is another important sector within the urban remit, making big decisions about the development of towns or cities. Planners aim to allow the development and improvement of UK urban areas, without compromising the historic nature of an area. The job can be challenging, with many stakeholders involved in one project – meeting everyone's needs for the area can be tricky. At the centre of regeneration in urban areas, a planner's main role is to ensure a development is sustainable, will drive the economy forwards and make a positive contribution to the local residents.
